

Expert Radiology Care at Meeker Memorial Hospital

Dr. Nihar Shah

**Body and Breast Radiologist
Greater MN Radiology Medical Director**

Do you know what happens after your MRI, CT or other radiology exam?

A radiologist (medical doctor) reviews, or “interprets,” the images from your exam, noting areas of concern or interest, and then dictates a report for your referring doctor.

Radiologists from Suburban Radiologic Consultants (SRC) interpret the exams performed at Meeker Memorial Hospital. SRC radiologists are subspecialists, meaning that the doctors have gone through additional years of training to provide expertise in certain body areas.

Body Radiologists

Radiologists specializing in body imaging study organ systems of the chest, abdomen and pelvis. Body radiologists interpret images from MRI, CT, PET, ultrasound and nuclear medicine exams.

Breast Radiologists

Radiologists specializing in breast imaging focus on mammography and diagnostic breast procedures. Our breast imaging radiologists also perform diagnostic procedures, including breast biopsies.

Musculoskeletal Radiologists

Radiologists specializing in musculoskeletal radiology focus on bones, joints and muscles. Musculoskeletal radiologists interpret images from MRI, CT and ultrasound exams.

Neuroradiologists

Radiologists specializing in neuroradiology focus on the central nervous system including the brain, head, neck, spine and corresponding blood vessels. Neuroradiologists interpret images from MRI/MRA, CT/CTA and ultrasound exams.

Suburban Radiologic Consultants

Suburban Radiologic Consultants provide expert subspecialty radiology care. The doctors are board certified by the American Board of Radiology and have extensive training and expertise in medical imaging.

The radiologists serve an important role in the care of patients by:

- Acting as an expert medical imaging consultant to referring physicians, providing guidance in the appropriate imaging work-up of medical problems.
- Correlating medical imaging findings with other exams and tests to make accurate diagnoses.
- Recommending further scans or treatments when necessary.
- Performing image-guided biopsies and other procedures.

The radiologists and Meeker Memorial Hospital are dedicated to providing the highest level of quality imaging services to all patients and healthcare providers.
